

ZIRMED[®] REMITS

Part of ZirMed's comprehensive revenue cycle management solution for healthcare

Lost remits and the time-consuming process of manually posting payments lead to costly delays and unrealized revenue.

But now there's a faster, more cost-effective way to reconcile payments with remits and other records. With ZirMed's Remits solution, you can receive all your remits electronically—from all payers and in one system.

With ZirMed Remits, it's easy to:

View, work, and post all of your remits in one place and with one easy-to-use interface—no more logging into multiple payer sites.

See all of your payment information at a glance on the Remits Dashboard.

See all of your recent remittances sorted by date, number of payments, and amount.

Search for and find any remit—then easily view the corresponding payment and deposit. No more lost remits!

Easily track, view, and download your remits for faster processing.

Track which payments arrive via check or EFT—and on what dates.

Avoid the delays and time-consuming process of posting payments manually.

No more searching for associated claims—unlike remits on payer websites, ZirMed links remits and claims together automatically.

Powerful features:

Electronic Remits

- Receive all remits from payers in the standard 835 electronic format.
- Can be set up to automatically optimize 835 files for your PM system—even for multiple systems.
- Just send us your recent remits files, and our dedicated enrollment team will facilitate enrollment with your payers.

Paper Remits

- Work paper remits electronically with automatic conversion to the 835 format (requires EOB Conversion or VeraFund).

Advanced Search Options

- Search by date, payment number, patient, ICN, patient number, and more.
- Quickly find the remits you need.

Flexible Build Options

- Set up files to download automatically or build files at your own convenience.
- Group your remit files by payer, date, or payment type.
- Choose the build option that matches your workflow and PM system requirements.

Separate Shared Remits

- Split remits and payments among multiple providers and PM systems.
